Cloud Managed Architecture

Built on Cisco Meraki's award-winning cloud-managed architecture, the MX is the only 100% cloud-managed Unified Threat Management appliance. MX appliances self-provision, automatically pulling policies and configuration settings from the cloud. Powerful remote tools provide network-wide visibility and control, and enable administration without on-site networking expertise.

Cloud services deliver seamless firmware and security signature updates, automatically establish site-to-site VPN tunnels, and provide 24x7 network monitoring. Moreover, the MX's browser-based management dashboard completely eliminates the need for training.

Cisco Meraki Cloud Management Architecture

Ironclad Security for Edge Networks

The MX hardware platform is purpose-built for Layer 7 deep packet inspection, with advanced security features including IPS, content filtering, web search filtering, anti-virus / anti-phishing, and IPsec VPN connectivity, while providing the throughput and capacity for modern, bandwidth-intensive networks.

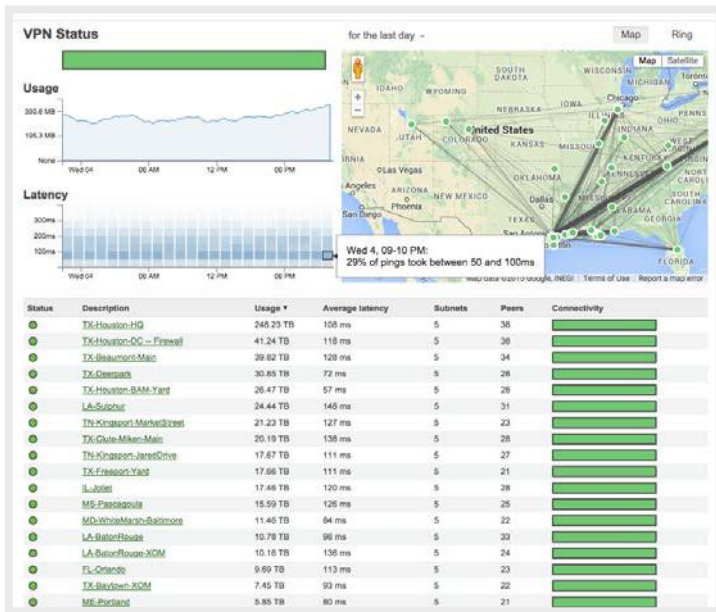

Layer 7 fingerprinting technology lets administrators identify unwanted content and applications and prevent recreational apps like BitTorrent from wasting precious bandwidth.

The integrated Sourcefire SNORT® engine delivers superior intrusion prevention coverage, a key requirement for PCI 3.0 compliance. The MX also uses the Webroot® URL categorization database for CIPA / IWF compliant content-filtering, Kaspersky® engine for anti-virus / anti-phishing filtering, and MaxMind for geo-IP based security rules

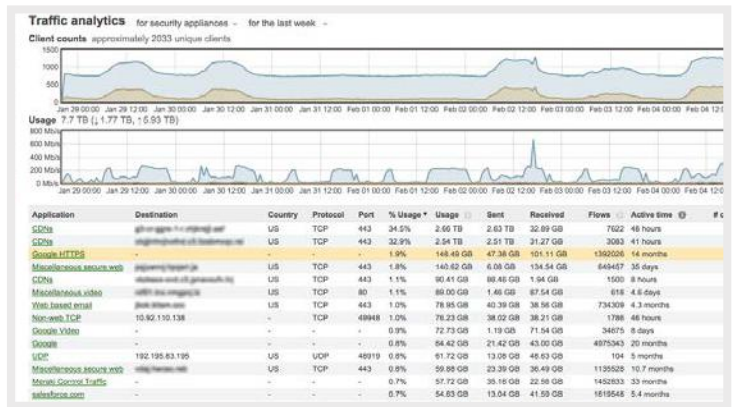

Best of all, these industry-leading Layer 7 security engines and signatures are always kept up-to-date via the cloud, simplifying network security management and providing peace-of-mind to IT administrators.

Link Bonding and Failover

Intelligent WAN Made Simple

Transport independence:

Dual WAN ports with load balancing and failover enable the use of MPLS and redundant, commodity Internet connections, providing additional bandwidth and higher reliability.

3G / 4G failover:

The Cisco Meraki MX supports 3G/4G service providers globally for WAN connection failover. Web caching temporarily stores video, media, and web documents, lowering bandwidth usage and accelerating the download speed of Internet content.

Application optimization:

Layer 7 traffic shaping, application prioritization optimize the traffic for mission-critical applications and user experience.

Intelligent path control*:

Use Performance-based-Routing to choose the best uplink based on latency or packet loss. Define policies for sending the right traffic through the appropriate path (e.g., send voice via MPLS, http via VPN over broadband).

Secure connectivity:

Cisco Meraki's unique auto provisioning site-to-site VPN (Auto VPN) connects branches securely with complete simplicity. Using AES 128-bit encryption, the MX Security Appliances automatically configure VPN parameters needed to establish and maintain VPN sessions. A unique cloud-enabled discovery mechanism enables automatic interconnection of VPN peers and routes across the WAN, and keeps them updated in dynamic IP environments.
